Our Point of Sales system also has ability to manage SPA & Reflexology business. It's integrated with Time Attendance System which gives a real-time & accurate current status of all theraphist, such as : On-Work, Standby, Break, etc. it also manages therapist booking from customers, display current status of each booking, and calculates therapist commission.

DreamPOS - The real solution for your dream business

Table Booking System

Our Point Of Sales system cover the whole range of what a restaurant needs. It includes an efficient & effective solution for customer to book table in advance. It has the flexibility with options to book a table, a whole room for functions or book multiple tables. Table Booking System is designed to manage & monitor real-time status of every table and shows table activities at current time and at certain point of time. This booking system allows customer to place a list of food they would like to order. This feature enables management to prepare all the resources necessary beforehand.

Accounting System

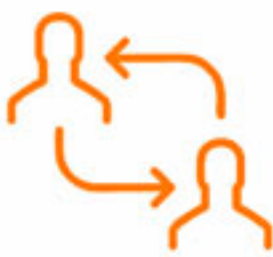

Our Software can be Integrated with your existing accounting system. It provides all the necessary data needed by the accounting system, to create a seamless 2 in 1 solution.

Multi Payment

Flexibility to combine two or more bills into one receipt.

Transfer Items

Gives flexibility to transfer items from one table to another, in the case of wrong order.

Price Management

Helps to differentiate price between meal periods.

Business Date

This feature is very important for restaurant with specific business time which is different from daily time setting.

Table Management

Support table layout design in every room, and has the possibility for joining and moving tables.

Split Bill

Allows customer to split a total bill into individual bills.

Multilingual

Interface is designed to accommodate different languages.

Simple Inventory

Cashier is able to directly monitor availability of items on menu and monitoring for simple stock.

Discount/Promo Management

Designed to eliminate mistake and pilferages, as discount and promotions are automatically deducted and executed upon ordering.

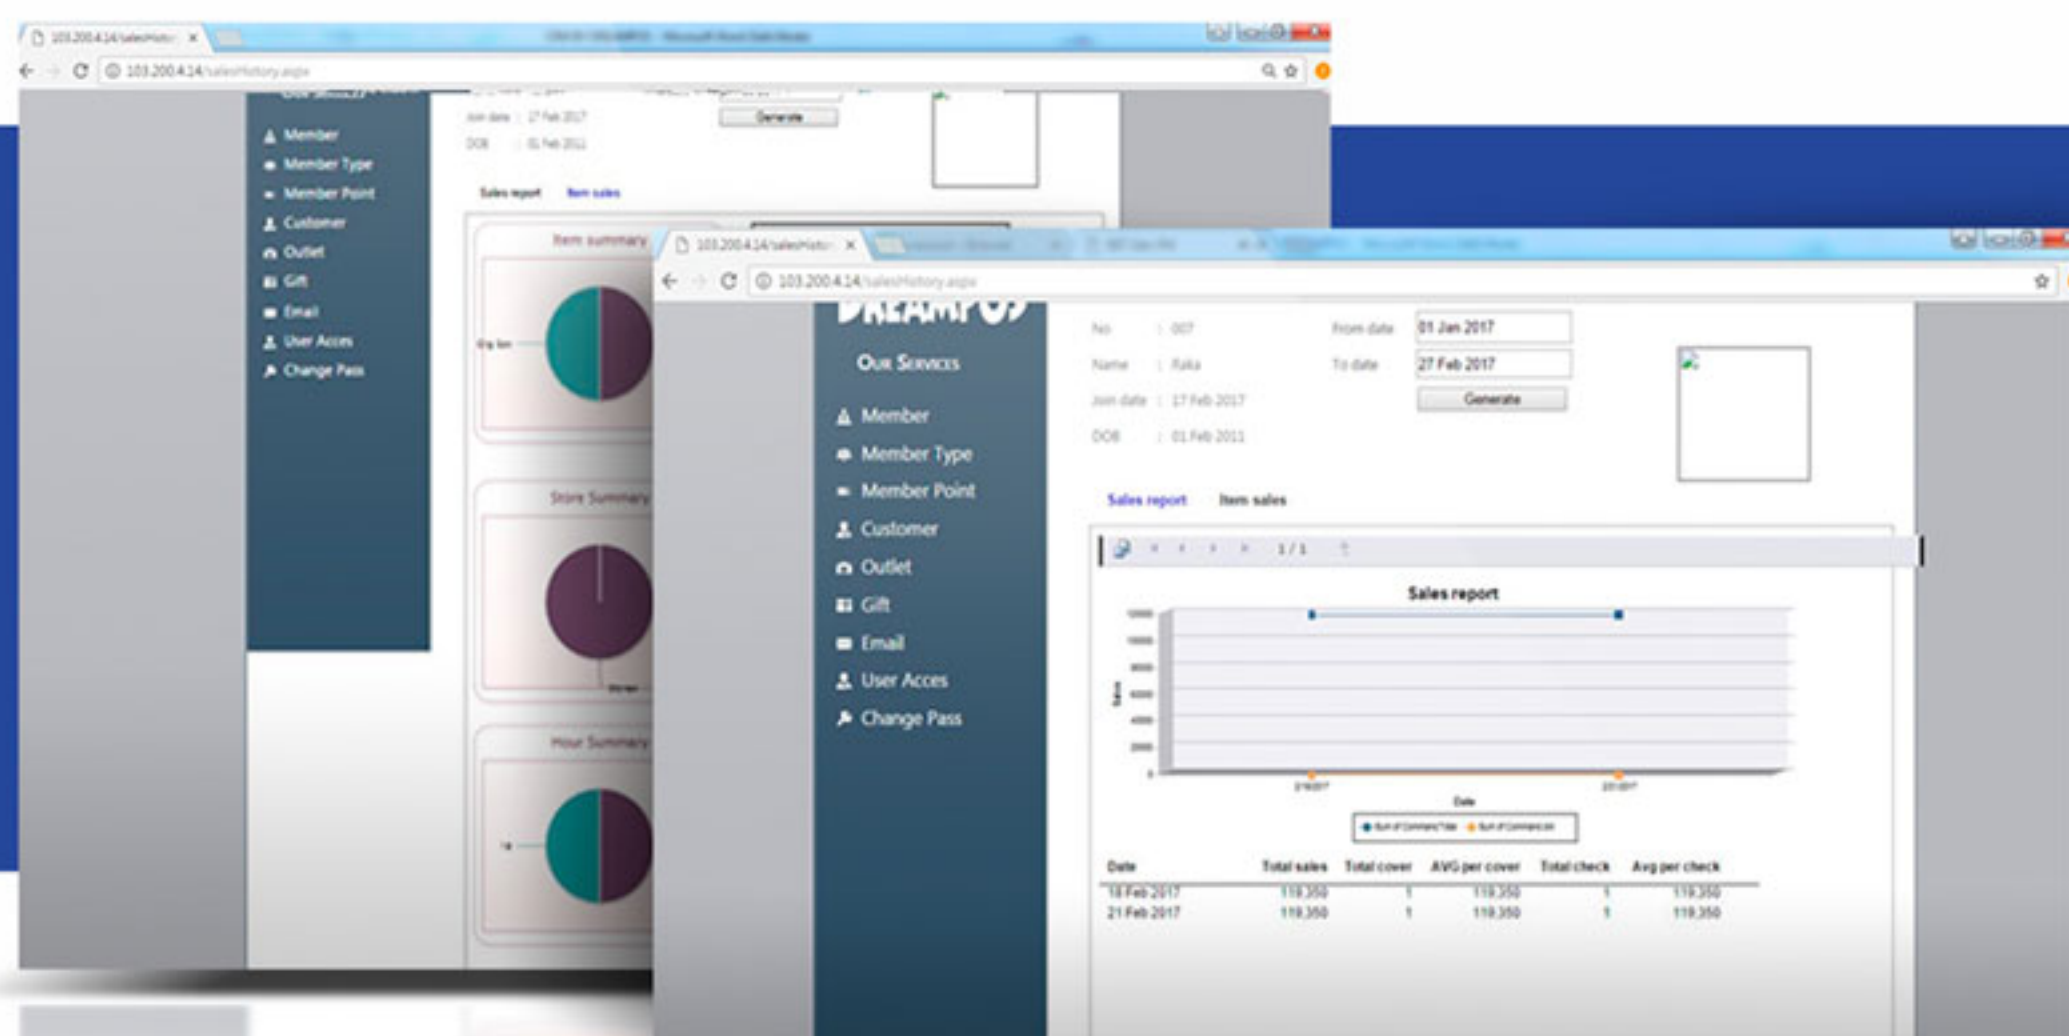

Cash Blind Balancing

Avoid cash fraudulent, cashier will have to do cash counting before system creates cashier report.

Customer Royalty Management (CRM)

DreamPOS CRM module is a web-based system designed to gather and manage all the information and activities of all members. With this system in place, you will get more knowledge and better understanding about every member. This module is also a cloud-based system, therefore we are able to access real-time data and transaction of our members at anytime, anywhere. Key features for this module are Member Loyalty Point and Member Deposit System.

Simple Inventory Module

User is able to directly monitor availability of items on menu screen and warning will be given when user tries to order out-of-stock items or when quantity ordered is more than quantity available. This new feature also enables us to record some information such as Opening Balance, Receive, Waste and Adjustment so that management will be able to see the movement of every item in reports on daily basis.

Interface With CCTV

DreamPOS has successfully built an interface with DVR. Each bill/struck printed will automatically be sent and recorded to the DVR/ CCTV, so we have record for every payment transaction.

DreamApp

This feature is the latest addition to DreamPOS solution to accommodate the growing number of mobile users. With the use of Apps in basically every part of our lives, this new feature is deemed necessary. From basically everywhere, customer can browse the menu, make a pre-order or delivery order, or have a look at the latest promotion from his/her mobile phone.

Headquarter Module

DreamPOS Headquarter is a restaurant Management Business Solution Software that gives the ability to program the Point-of-Sale system for your entire chains from one central point. The Headquarter Module gives you uniformity in programing, control of contents and have the ability to execute updates on a timely basis. The DreamPOS Headquarter also can consolidate your store daily reports at the corporate head office, using encrypted communication via the internet. It provides the ability to build Sales Reports and Item Reports, which are available for viewing when required.

Queuing System

DreamPOS Queuing System is a highly-customizable module to improve the efficiency and accuracy, as well as to speed up the ordering process. This module holds an essential part not only for restaurants with high number of customers in waiting line, but also for any restaurant which likes to give a whole new experience for customers to key in their orders directly into the system.
